Application (intended use)

The MOLOSvibro of the VF10 series is intended for the use as

level limit switch

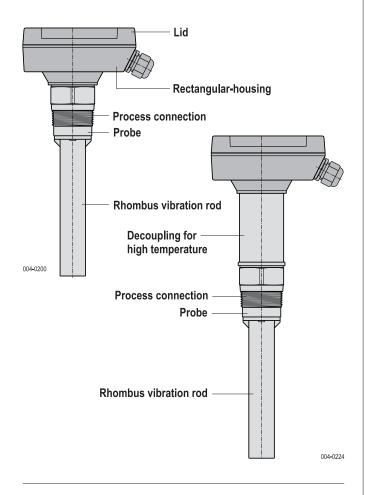

in silos and vessels.

For all bulk solids with a minimum density of

0.01 t/m³.

For application in all industry sectors.

Bauweise

Characteristics

- Very robust vibration rod in Rhombus shape
- High sensitivity for bulk solids with a minimum density of 10 g/l
- Interface measurement possible
- Patented, braced membrane

02

- No digging free within the bulk solids due to small vibration amplitude
- Adjustable sensitivity in three setting adjustments: A for light, B for normal and C for sticking bulk solids
- High level and low level alarm selectable

Function

- Oscillation of the Rhombus vibration rod with a resonance frequency of approx. 285 Hz is stimulated by the electronic.
- As soon as the vibration rod has been covered by bulk solids, the oscillation will be damped.
- The electronic detects the damping and switches the relay signal.
- If the filling level sinks below the vibration rod, the rod starts vibrating with its resonance frequency again and the relay switches back.

Technical data

Rectangular-housing Material Aluminium, RAL7001 Process connection and probe Stainless steel 1.4301 / 304 Rhombus vibration rod Stainless steel 1.4301 / 304 Suspension cable sheath Polyurethane

Dimensions

A22 Separate rectangular-housing

Front and side views

With the separate rectangular-housing the electronic will be mounted remote from the probe.

Application

- In vessels with heavy vibrations
- Process temperatures of 150 °C to 250 °C only in combination with lead-through housing in hightemperature design
- Ambient temperatures up to +80 °C in close proximity to the container wall.

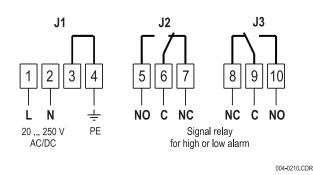

Separate rectangular-housing combinable with:

A22 lead-through housing at the probe

Metal protection tube with 2 m length. Different length on request.

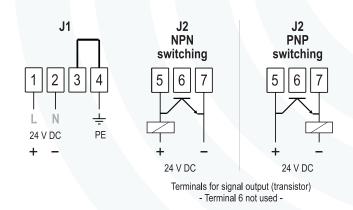

Electrical connection

Wide range electronic C8 (not available with GasEx option B11)

Electrical connection

Electrical connection

Two wire electronic C5i (only available with GasEx option B11)

Supply voltage U_i 23.7 V DC from VF-VEC8-B22 I_i 167 mA P_i 958 mW L_i negligible C_i negligible

Supply only with supply and evaluation device VF-VEC8-B22 for GasEx.

Current consumption

High alarm FH Vibration rod oscillates freely 8 mA Vibration rod covered 16 mA

Low alarm FL Vibration rod covered 8 mA Vibration rod oscillates freely 16 mA

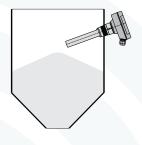

Vibro level indicator VF10

High alarm sensor FH (factory setting)

MOLOSvibro level indicator of the VF10 series are configurated for high level alarm in the factory setting. The function can be changed with a jumper on the electronic board. The switching status is indicated by a LED on the electronic board, like it is explained below.

VF10-GI-05

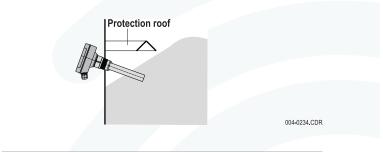

Possibilities for installation

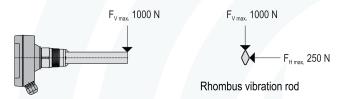

Protection against heavy load

If needed, a protection roof or a stable deflector has to be installed inside the container, in order to protect the probe and the rod against impinging bulk solids.

Between protection roof and the probe has to be enough space that bulk solids could penetrate but not jam.

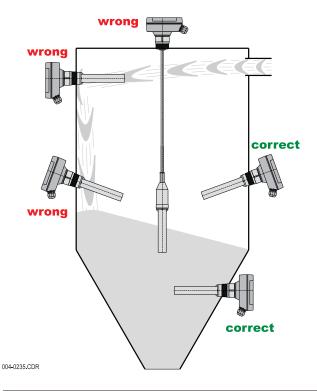

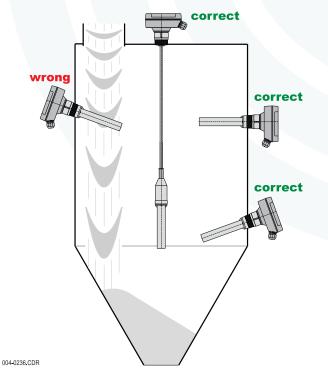

Maximum load for vibration rod

Protection against bulk solids crashing down upon the rod

Level indicators must not be affected by flying bulk goods particles e.g. from injection pies, filling pipes or down pipes. Therefore the bulk solids stream should be directed or redirected accordingly, or the level indicator should be placed so that bulk solids cannot impact directly onto the probe and vibration rod.

06

VF-VEC8-B22

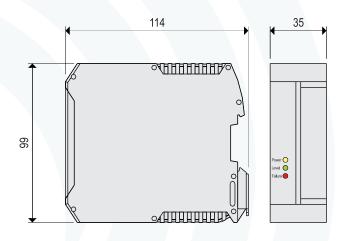

Application (intended use)

The supply and evaluation device type **VF-VEC8-B22** is intended for the use as power supply for **MOLOSvibro** level indicators that are used in potentially explosive gas atmospheres.

It detects and evaluates the damping of the vibration rod, switches the signal relay and diagnoses a short circuit or broken cable at the connection to the probe and switches the failure relay.

Dimensions
